Speaker 1

0:01

Part Three study options. You will hear a professor talking to her student about his study options. Before you listen, you have 30 seconds to read questions 21 to 24?

0:46

Come in ranky.

0:47

Thank you, Professor Anderson.

0:50

I've been meaning to contact you. But I just got back last night.

0:53

Where have you been?

0:54

Conferences in Massachusetts and New York?

2

Speaker 2

0:57

For physics? Yes. Great. I'm looking forward to attending conferences one day.

3

Speaker 3

1:04

I imagine that won't be so far away. I was extremely impressed with your classical mechanics exam. In fact, you were one of only two students out of 180 to get an A plus.

1:15

Wow, I really did enjoy the course.

1:19

So how can I help you?

2

Speaker 2

1:20

I'm sorry to say it's a bit of a long story. You see, I've had to rethink my studies completely. And I wonder if I'm making the right decision.

1:30

You're doing two degrees and you science and arts

2

Speaker 2

1:33

I was doing to I've decided to focus on science. Oh, it all came about because I wanted to study abroad for a year, I was thinking about Edinburgh. Firstly, I sought approval from the maths and physics departments. I wanted to take quantum mechanics and computer simulations at Edinboro.

3

Speaker 3

1:53

Those are third year courses, right? Yeah. So

2

Speaker 2

1:57

I received approval from maths and physics. The stumbling block was the higher authority, the science faculty. When I submitted my application, it was rejected. What? It turns out that students who study abroad for a year can only do first or second year courses or third year courses in a subject. That's not their major. I've never heard that before. Needless to say, the lecturers who approved my transfer hadn't either, and nor does the regulation appear on the science faculty website.

2:29

That'd be right. This faculty is disorganized.

2

Speaker 2

2:33

So then I thought I'd take art courses at Edinburgh and leave the third year maths until I came back. I quickly got approval for second year history and philosophy from the arts faculty.

2:44

When are you heading off?

2

Speaker 2

2:46

That's just it. During this process, I began to think carefully about my studies. To be honest, the arts courses I've done were less challenging than the science ones. So I've decided to drop arts.

1

Speaker 1

2:59

Before you listen to the rest of the conversation, you have 30 seconds to read questions 25 to 30?

3:35

Where do I figure in all this?

2

Speaker 2

3:37

The first week after I'd made my decision, I felt fine. Without doing the art courses. I could finish my science degree earlier. But this week, I've had some doubts. When I started the two degrees. Lecturers in the science faculty assured me that these days scientists need a rounded education, which they get if they take some arts courses. I was even told I'd learned to write and think better if I did philosophy.

3

Speaker 3

4:04

I do think the claims made by some lecturers are dubious.

2

Speaker 2

4:07

Then there's the fact that now I'm going to be stuck here next year. I was so excited about going to Europe.

3

Speaker 3

4:14

It is disappointing to give that up. Still, the reason I wanted to contact you rhaggy is that I'm looking for students to work six hours a week in my lab. It's paid work, not highly paid, but probably better than working in a bar. Also, we've just bought a new laser, which you'd learn to use.

4:32

That sounds excellent. As to going abroad.

3

Speaker 3

4:35

Why not do your Postgraduate Studies in the US. There's some amazing physics being done in Massachusetts. If you like I can send you the papers from the conference.

Thanks. Of course, I'd be sad to lose you if you did go abroad. But an A plus student like you has a very good chance of winning a major scholarship.

4:52

Goodness, I've never even considered that.

4:55

Personally, I think committing yourself to science is the way to go.

2

Speaker 2

4:59

Thanks for SR Anderson, you've taken a load off my mind. Now I don't have to deal with Hegel or liveness. I have plenty of time to read those conference papers.

1

Speaker 1

5:12

That is the end of part three. You now have 30 seconds to check your answers to part three.
